

# RAGASREE THATIPAMULA

## Data Analyst

Irving, Tx, USA|945-268-4102| [ragasree294@gmail.com](mailto:ragasree294@gmail.com) | [GitHub](#) | [LinkedIn](#) |

### Summary

**Data Analyst with 6+ years of hands-on experience building end-to-end analytics and business intelligence solutions** across healthcare, finance, and **enterprise environments**.

Expert in **SQL, Python, Power BI, Tableau, and Microsoft Excel**, with strong practical experience in **dashboard development, KPI reporting, data quality management, automation, and large-scale dataset analysis**.

Experience in analyzing **financial and transactional datasets** to evaluate **performance trends, customer behavior, and risk indicators**, supporting data-driven decision-making in regulated environments.

Exposure to portfolio-style analytics including trend analysis, forecasting, and performance monitoring across large-scale datasets.

### Technical Skills

- **BI & Analytics Core:** Data Analysis, Business Intelligence, KPI Reporting, Dashboard Development, Data Visualization, Exploratory Data Analysis (EDA), Trend Analysis, Forecasting, Root Cause Analysis, Statistical Analysis, A/B Testing, Hypothesis Testing, Regression Analysis, Variance Analysis, Data Storytelling, Decision Support Analytics
- **Reporting & Visualization:** Power BI, Power Query, DAX, Tableau, SSRS, Microsoft Fabric, Interactive Dashboards, Executive Reporting, Drill-Down Reports, KPI Scorecards, Trend & Performance Dashboards
- **SQL & Databases:** SQL, Advanced Querying, Joins, Subqueries, Window Functions, CTEs, Stored Procedures, Query Optimization, Data Modeling, MySQL, Microsoft SQL Server, PostgreSQL, Oracle, Snowflake, Teradata, SQLite
- **Programming & Analytics Tools:** Python, Pandas, NumPy, Matplotlib, Seaborn, Plotly, R, Excel VBA, Data Automation, Scripting, ETL/ELT Processing
- **Data Engineering & Automation:** ETL Pipelines, Data Integration, Workflow Automation, Scheduled Reporting, Apache Airflow, Databricks, Data Warehousing, Data Transformation, Batch Processing, Report Automation, API Data Extraction, Snowflake, AWS Redshift, Data Lakehouse Architecture, ETL/ELT Pipelines
- **Cloud & Platforms:** AWS (S3, RDS, Redshift, EC2, Athena, EMR), Google Cloud (BigQuery), Azure (Azure SQL, Azure Cost Management), Microsoft Fabric, Snowflake, Hybrid Data Environments
- **Data Quality & Governance:** Data Cleansing, Data Validation, Reconciliation, Duplicate Detection, Missing Value Handling, Standardization, Metadata Management, Data Integrity Controls, Governance Compliance, Audit Reporting Support, Quality Assurance, Data Lineage, Data Traceability
- **Insurance & Risk Analytics:** Claims Analysis, Policy Data, Billing Data, Risk Analysis, Customer Segmentation, Churn Analysis
- **Business & Domain Analytics:** Healthcare Analytics, Financial Analytics, Banking Analytics, Operational Analytics, Customer Behavior Analysis, Cost Optimization Analytics, Revenue & Performance Reporting, Risk & Compliance Reporting
- **Collaboration & Productivity Tools:** Jira, Git, GitHub, Microsoft Office, Microsoft Excel, Google Sheets, Cross-Functional Stakeholder Management, Agile / Scrum
- **Operating Systems:** Linux, UNIX, Windows, macOS

### Work Experience

#### The Cigna Group

2024 - Present

#### Data Analyst

Texas

- Improved **reporting turnaround time by ~40%** by optimizing enterprise analytics workflows using **SQL tuning, automated refresh pipelines**, and **streamlined data transformations** across multi-source healthcare datasets, significantly enhancing stakeholder access to timely insights.
- Increased **reporting accuracy by ~30%** by strengthening data validation pipelines with **reconciliation checks, duplicate detection, metadata standardization**, and **anomaly review** processes across **Microsoft SQL Server, Teradata, and Oracle Database** systems.
- Increased **stakeholder engagement by ~30%** by implementing interactive **Power BI dashboards** with drill-down filters, **KPI scorecards**, and self-service reporting layers that enabled faster business decisions.
- Built KPI frameworks to monitor performance trends, anomaly patterns, and leading indicators across datasets.
- Delivered executive-ready insights by combining quantitative analysis with business context, improving strategic decision-making.
- **Engineered** near real-time reporting workflows using **SQL procedures, Power Query, and automated refresh schedules**, improving responsiveness for live **operational performance** tracking.
- **Developed** high-volume data processing pipelines using **Python, SQL, and ETL** tools to support integrated reporting across structured files, internal warehouse systems, and business applications.

- **Implemented** anomaly detection and variance analysis models by reviewing **trend deviations, utilization patterns, and reporting** inconsistencies, helping leadership proactively identify operational risks.
- Analyzed large-scale **insurance** and **financial** datasets to identify performance trends, risk indicators, and customer behavior patterns, supporting operational and strategic decisions.
- Documented **data logic, business rules, and dataset** definitions to support reporting consistency and governance.
- Supported **regulatory and compliance reporting** by ensuring data accuracy, traceability, and audit-ready datasets.
- Collaborated with business stakeholders to translate **insurance domain requirements** into SQL queries, reporting datasets, and dashboards.
- Analyzed product usage patterns and user **interaction** data to identify adoption trends, **engagement** levels, and opportunities to improve user experience.
- Evaluated operational workflows and identified friction points in **data processes, translating** findings into **actionable** improvements for system efficiency and user satisfaction.
- Partnered with cross-functional teams including **product, operations, and business stakeholders** to translate data insights into process improvements and feature enhancements.
- Developed metrics to track **onboarding** effectiveness, **time-to-value**, and early **engagement** indicators across analytics workflows.
- Automated analytics deployment and reporting workflows using **Python, scheduled jobs, and version-controlled assets**, improving release consistency and reducing manual maintenance effort.
- Integrated **observability** and **monitoring** for reporting systems using alerting dashboards, refresh health checks, and performance metrics, **improving incident detection and reducing issue resolution time by ~45%.**
- Experience analyzing user behavior, **product adoption, and operational** workflows to improve engagement, retention, and overall business performance.
- Strengthened data governance, privacy, and compliance controls by implementing **validation rules, access controls**, audit-ready reporting, and sensitive data handling practices, improving trust and reliability of enterprise analytics outputs.
- Provided data extracts and trend analysis to support **business and risk teams**, including claims patterns and performance insights.

## Info Tech

2021 - 2023

### Data Analyst

India

- Built **interactive analytical dashboards** using **Tableau** to visualize user segments, engagement funnels, and recommendation performance metrics, accelerating data-driven decision-making and reducing reliance on intuition by **~20%.** \
- Built interactive **Tableau** dashboards to track **KPIs** such as user engagement, conversion rates, customer retention, and funnel performance across digital platforms.
- Reduced recurring **reporting turnaround time by ~45%** by optimizing **data pipelines, automating scheduled workflows, and streamlining** multi-source integrations across Snowflake, Databricks, AWS, and enterprise systems.
- Improved **data accuracy and control effectiveness by ~30%** by enhancing reconciliation **frameworks, duplicate checks, and validation** processes across access management, user lifecycle, and compliance datasets.
- **Increased stakeholder visibility by ~35%** by implementing executive **Power BI and Tableau** dashboards for **KPI** monitoring, cost analytics, and operational performance trends.
- Identified operational inefficiencies and recommended process improvements using data analysis, improving **workflow efficiency and performance tracking.**
- Supported **forecasting and performance** modeling using **historical trends and statistical techniques** to guide business planning and decision-making.
- Built and optimized scalable analytics datasets for large enterprise controls and operational data, enabling faster ad hoc reporting and trusted decision support.
- Developed **forecasting** models using **historical** trends and time-series analysis to predict business performance metrics and support strategic planning.
- Engineered near real-time reporting pipelines using **Python, Databricks, and automated** distribution workflows, improving speed and consistency of daily business reporting.
- Developed high-volume transformation pipelines using **Python, Pandas, SQLAlchemy, and Snowflake** connectors to integrate structured data across multiple platforms.
- Implemented **anomaly detection** and variance analysis across governance and controls data, helping business teams proactively identify exceptions and operational risks.
- **Automated 35+ analytics and reconciliation** workflows using **Python and Alteryx, saving ~120 annual hours** of manual effort while improving process consistency.
- Conducted post-campaign and **A/B test analysis** to evaluate performance impact, measure **ROI**, and provide recommendations for optimization.
- Integrated monitoring and issue-tracking practices through **Jira dashboards and workflow** alerts, improving visibility into data incidents and **reducing resolution time by ~40%.**
- Strengthened governance and compliance reporting by **implementing standardized controls, documentation processes, and trusted** datasets for **SOX and non-SOX** stakeholders.
- Performed **customer segmentation and behavior analysis** to identify churn risks, engagement patterns, and business opportunities.

- **Improved query performance by ~35%** by optimizing complex **MySQL** reporting workloads using joins, **CTEs**, **stored procedures**, and **window functions** across large customer activity datasets.
- **Increased customer retention insights by ~30%** by enhancing user analytics models with **segmentation**, **cohort analysis**, and **behavior** trend reporting across large-scale operational data.
- **Increased executive engagement by ~30%** by implementing interactive **Tableau dashboards** integrating data from **Microsoft Excel**, **AWS S3**, **RDS**, **Redshift**, **JSON**, and **XML** sources.
- Built and optimized enterprise data marts and **reporting** layers for **product performance**, **usage metrics**, and **business KPI tracking**, enabling scalable analytics delivery.
- Engineered automated **ETL** workflows using **Python**, **Apache Airflow**, and **SQL pipelines**, improving consistency and timeliness of recurring reports.
- Developed large-scale data processing pipelines using **Hadoop**, **Hive**, **Spark**, and **Spark SQL** for historical logs, feature generation, and enterprise analytics use cases.
- **Implemented anomaly detection** and trend analysis across user activity and product metrics, helping stakeholders proactively address churn risks and underperforming segments.
- **Automated** data cleansing, duplicate resolution, and consistency checks using **Python** and **Pandas**, reducing manual **validation effort** by **~40%**.
- Integrated **reporting observability** through refresh monitoring, performance tracking, and issue alerts, reducing reporting downtime and **issue resolution time by ~35%**.
- Strengthened experimentation and decision-making processes by building **A/B testing dashboards** and **translating statistical outcomes** into **actionable business** recommendations.

## PROJECTS

---

### Olist E-commerce Analytics – End-to-End Business Intelligence Project

- Built a real-world e-commerce analytics solution using Python, SQL, and Microsoft Excel to analyze 100,000+ customer orders, uncover delivery performance trends, customer satisfaction drivers, and revenue insights through dashboards and KPI reporting. [GITHUB](#)

### Interactive Data Visualization Dashboard – D3.js Analytics Project

- Built responsive and interactive business dashboards using D3.js, JavaScript, HTML, and CSS, transforming raw datasets into insightful visualizations including pie charts, area charts, bar charts, and trend-based reporting views. [GITHUB](#)

### Personal Portfolio Website – Data Analytics & Professional Branding Platform

- Designed the site to highlight end-to-end projects involving SQL, Python, Power BI, Tableau, and data visualization. Integrated GitHub project links, career highlights, and contact features to strengthen personal branding and improve engagement. Focused on intuitive navigation, modern UI design, mobile responsiveness, and professional storytelling to present technical work effectively. [GITHUB](#)

## EDUCATION

---

University Of North Texas, Masters in Computer Science

2023 - 2025

Jawaharlal Nehru Technological University

2017 - 2021
